

Mathematics

For children's success and security beyond education, it is absolutely crucial for them to have a solid understanding of mathematics, and we are committed to making this happen.

At Prettygate Schools, our children experience a wide variety of mathematical opportunities that are both accessible and inclusive, allowing every child to succeed. They are taught through concrete, pictorial and abstract approaches, which develop our children into both capable and independent mathematicians. Mathematics provision develops conceptual understanding, the ability to recall and apply knowledge rapidly and accurately, and to solve mathematical problems of increasing complexity. Teaching key mathematical language enables our children to successfully reason and communicate their mathematical ideas, and provides them with the mathematical skills needed for adult life.
