

Computing

At Prettygate Schools, we aim for all children to be able to use computing as an essential tool for learning in our technologically advanced world. Through our computing lessons, children are given the opportunity to develop a range of skills such as programming, developing logical reasoning to solve algorithms, and understanding how computers and the internet work. We continue to invest in new technologies to support our ambitious curriculum, with children having to laptops and iPads with a range of educational apps.

We recognise the vital importance of educating children to keep themselves and others safe online, and we strive to do this with all year groups.

Computing is deeply linked across our curriculum and we provide opportunities to use the skills learnt in computing lessons across a range of subject areas, enabling them to be prepared for using technology for a range of purposes in our modern world.
